WMM8G-WMMG Install Antenna Detail.pdf (5.6 MB) Jesus Angel Gomez.vcf (79.9 KB) – **Download all**

Honorable Judge LeeAnn Jones,

The Texas Department of Public Safety (DPS) Information Technology (IT) Team will begin working on a project to install an Ultra Wide Band (Cradle Point) antenna at each of the Driver License (DL) Centers.

The Cradle Point antenna will support and supplement our DL customer service and essential equipment that supports the DL division to function at optimal levels. The Project is anticipated to begin in July and end by August 31st.

The Cradle Point antenna is approximately 7 inches by 7 inches and would typically be mounted on the exterior wall of a building with cabling being run back to the DPS Data/Telecom equipment room. Where the Cradle Point antenna can only be located on the roof, the antenna would be anchored to cinder blocks on a specialized matt to prevent damage to the roof. I have attached the manufacturer installation details of the antenna for your review.

We understand that each site is unique and may require additional work and or restricted by the building design.

Therefore, we seek permission to proceed with installation as well any additional requirements and or restrictions before we can schedule the installation.

Please do not hesitate to call me directly if you have any questions or require additional information.

Respectfully,

Jesus Ángel Gómez
